ma-x-equiv^{0,22}

$(s_1 \equiv s_2 \text{ mod } x) \ \equiv_{\text{def}} \ \forall z{:}\text{Id}.\ \neg z = x \Rightarrow s_1(z) = s_2(z)$

clarification:

$\text{ma-x-equiv}(M;x;s_1;s_2) \ \equiv_{\text{def}} \ \forall z{:}\text{Id}.\ \neg z = x \in \text{Id} \Rightarrow s_1(z) = s_2(z) \in M.\text{ds}(z)$
