

normal-da^{0,22}

$\text{Normal}(da) \equiv_{\text{def}} \forall x \in \text{dom}(da). A = da(x) \Rightarrow \text{Normal}(A)$

clarification:

$\text{normal-da}\{i:l\}(da) \equiv_{\text{def}} \text{fpf-all}(\text{Knd}; \text{KindDeq}; da; x, A.\text{normal-type}\{i:l\}(A))$
