

**es-stable**<sup>0,22</sup>

$\text{@}i \text{ stable } state.P(state) \equiv_{\text{def}} \forall e \text{@}i. P(\text{state when } e) \Rightarrow P(\text{state after } e)$

*clarification:*

$\text{es-stable}(es;i;state.P(state))$

$\equiv_{\text{def}} \text{alle-at}(es;i;e.P(\text{es-state-when}(es;e)) \Rightarrow P(\text{es-state-after}(es;e)))$
