

**alle-rcv**<sup>0,22</sup>

$\forall e = \text{rcv}(l, tg). P(e) \equiv_{\text{def}} \forall e: \mathbf{E}. \text{kind}(e) = \text{rcv}(l, tg) \Rightarrow P(e)$

*clarification:*

$\text{alle-rcv}(es; l; tg; e.P(e)) \equiv_{\text{def}} \forall e: \text{es-}\mathbf{E}(es). \text{es-kind}(es; e) = \text{rcv}(l, tg) \in \text{Knd} \Rightarrow P(e)$
