

## **sframe-p**<sup>0,22</sup>

only events in  $L$  send on  $l$  with  $tg \equiv_{\text{def}} \forall e:\mathbf{E}. \text{kind}(e) = \text{rcv}(l, tg) \Rightarrow (\text{kind}(\text{sender}(e)) \in L)$

*clarification:*

$\text{sframe-p}(es; l; tg; L)$

$\equiv_{\text{def}} \forall e:\text{es-}\mathbf{E}(es).$

$\text{es-kind}(es; e) = \text{rcv}(l, tg) \in \mathbf{Knd} \Rightarrow (\text{es-kind}(es; \text{es-sender}(es; e)) \in L \in \mathbf{Knd})$
