

**alle-at1**<sup>0,22</sup>

$@i \text{ always}.P(x) \equiv_{\text{def}} \forall e@i. P(x \text{ when } e)$

*clarification:*

$\text{alle-at1}(es; i; x; x.P(x)) \equiv_{\text{def}} \text{alle-at}(es; i; e.P(\text{es-when}(es; x; e)))$
