ma-x-tequiv[11,40]

ma-x-tequiv(M;x;s_1;s_2) $\equiv_{\text{def}}$ $\forall z$:Id. $(\neg(z = x)) \Rightarrow (s_1(z) = s_2(z))$

clarification:

ma-x-tequiv(M;x;s_1;s_2) $\equiv_{\text{def}}$ $\forall z$:Id. $(\neg(z = x \in \text{Id})) \Rightarrow (s_1(z) = s_2(z) \in \mathbb{Q} \rightarrow M.\text{ds}(z))$
