ma-x-equiv[11,40]

$(s_1 \equiv s_2 \bmod x) \equiv_{\text{def}} \forall z{:}\text{Id}.\ (\neg(z = x)) \Rightarrow (s_1(z) = s_2(z))$

clarification:

ma-x-equiv$(M;x;s_1;s_2) \equiv_{\text{def}} \forall z{:}\text{Id}.\ (\neg(z = x \in \text{Id})) \Rightarrow (s_1(z) = s_2(z) \in M.\text{ds}(z))$
