

alle-rcv^{11,40}

$\forall e = \text{rcv}(l, tg). P(e) \equiv_{\text{def}} \forall e : \mathbf{E}. (\text{kind}(e) = \text{rcv}(l, tg)) \Rightarrow P(e)$

clarification:

$\text{alle-rcv}(es; l; tg; e. P(e)) \equiv_{\text{def}} \forall e : \text{es-}\mathbf{E}(es). (\text{es-kind}(es; e) = \text{rcv}(l, tg) \in \mathbf{Knd}) \Rightarrow P(e)$
