

existse-rcv^{11,40}

$\exists e = \text{rcv}(l, tg). P(e) \equiv_{\text{def}} \exists e : E. (\text{kind}(e) = \text{rcv}(l, tg) \ \& \ P(e))$

clarification:

$\text{existse-rcv}(es; l; tg; e. P(e)) \equiv_{\text{def}} \exists e : \text{es-E}(es). (\text{es-kind}(es; e) = \text{rcv}(l, tg) \in \text{Knd} \ \& \ P(e))$
