

**fpf-val**<sup>11,40</sup>

$$z \text{ !} = f(x) \Rightarrow P(a;z) \equiv_{\text{def}} (\uparrow x \in \text{dom}(f)) \Rightarrow P(x;f(x))$$

*clarification:*

$$\text{fpf-val}(eq; f; x; a, z.P(a;z)) \equiv_{\text{def}} (\uparrow \text{fpf-dom}(eq; x; f)) \Rightarrow P(x;f eq(x))$$
